How will we proceed?

Have to study **Artificial Neural** Network & Convolution Neural Network

What do they THINK AND FEEL?

lead to increased intake of medication or carelessness which may create other side effects

Late detection may

This application may be used in products like smartphone,smart watches

Automated diagnosis can help doctors focus on treatment and treat patients immediately

What do they

HEAR?

what friends say

what influencers say

Flaws in newly

launced

products and

comparision

what boss say

The ECG is a safe and non invasive procedure with no known risk

Arrhythmia database can classify five kinds of wave forms and normal basis

> ECG is a quick and painless test that record electrical signals in the heart

find the required product?

What if i don't

what really counts major preoccupations worries & aspirations

UI should be somethimes classic

Used in the diagnosis and prediction of cardiovascular diseases(CVDs)

Heart Patients

or prone to

cardiac

diseases due

to genetics

What do they SEE?

The rhythm

recorded by an

ECG is often

printed out to show

how fast your heart

is beating

environment friends what the market offers

> In general symptoms of arrhythmia may include fluttering in the chest

Arrhythmias where the heart beats too slowly too quickly or irregularly

What do they SAY AND DO?

attitude in public appearance behavior towards others

The people who may be at the risk of heart diseases because there is a family history of heart diseases

To detect any abonormality in the heartbeat rhythm

Are there chances of misdiagnosis? what if I'm the one?

fears frustrations

How accurate can the machine predict?

Late detection may lead to lesser survival rate.Chances of arrhythmia may go up as you grow old

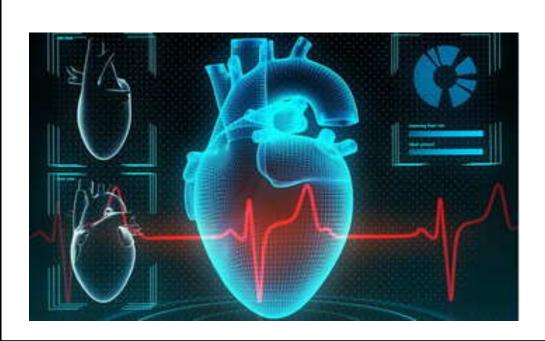

Annalysis and

GAIN

"wants" / needs measures of success obstacles

Automated Classification of independent of manpower

profitable

PAIN

obstacles

observing ECG signals may take long hours.Ai can reduce the timr taken
